

Privacy Policy

For the MealUp iOS application and related services

Effective / Last updated: 30 September 2026

Summary. MealUp is a general-wellness app that lets users photograph meals, save meal history, set food preferences and goals, and receive AI-powered meal analysis and upgrade suggestions. This Policy explains what information MealUp processes, why it is processed, who receives it, and how users can control or delete it.

1. Who We Are

MealUp is operated by Yip Angela Hoy Kay in Hong Kong. In this Privacy Policy, “MealUp,” “we,” “us,” and “our” refer to the MealUp service and its operator. Privacy questions and requests can be sent to angelahoykay@outlook.com.

2. Information MealUp Collects and Stores

Depending on the features you use, MealUp may collect or store the following categories of information:

- Account and profile information, including your email address, account/profile details, authentication and session information, and identifiers used by Supabase and RevenueCat.
- Meal information, including meal photos, meal records, meal type, logged time, recognized food names, estimated portions or nutrition-related attributes, and saved meal items.
- Personalization information, including nutrition or improvement goals, dietary preferences, ingredients or foods to avoid, preferred upgrade intensity, and accepted meal suggestions.
- Subscription and access information, including entitlement/subscription status and usage or credit records used to operate free or paid features.
- Technical information processed by our service providers as needed to operate the Service, which may include IP addresses, request data, authentication data, or diagnostic information.
- Support communications and information you choose to send to us when requesting help or exercising a privacy right.

MealUp does not currently use advertising or attribution SDKs, does not request the advertising identifier, and does not collect precise or approximate location data. MealUp also does not currently use a separate analytics SDK or crash-reporting SDK.

3. Camera and Photo Library

MealUp may request access to your device camera or photo library when you choose to take or upload a meal photo. These permissions are used only to support features you initiate. You can change camera or photo-library permissions in your device settings.

4. How MealUp Uses Information

- To create and manage your account and authenticate you.
- To store and display your saved meals and meal history.
- To analyze meal photos and generate AI-powered meal upgrade suggestions when you choose to use those features.
- To personalize suggestions using the goals, preferences, avoid items, and upgrade intensity you provide.

- To operate subscription access, entitlements, and usage limits.
- To provide support, maintain security, prevent abuse, troubleshoot the Service, and comply with legal obligations.

5. AI Processing, Consent, and Google Gemini

MealUp uses Google Gemini API for meal-photo analysis and meal-upgrade suggestions. When you choose an AI feature, the actual meal image is sent to Google Gemini as image data for multimodal analysis. Relevant meal details, preferences, and goals may also be included when needed to generate the requested result. MealUp is not designed to send your email address or Apple sign-in credential to Gemini as part of meal analysis.

MealUp does not use Gemini’s File API for this processing, and MealUp’s application code is not designed to save Gemini prompts or generated responses to MealUp’s own database or application logs.

Before MealUp first sends a meal photo or relevant personal information to Google Gemini, the app will display a disclosure identifying Google Gemini, the categories of information that will be shared, and the purpose of the sharing. Tapping “Continue” after that disclosure gives permission for the disclosed data to be sent for the requested AI processing. If you do not continue, the relevant AI feature may not be available.

You may withdraw permission for future AI processing by stopping use of the AI feature and contacting us at angelahoykay@outlook.com. Withdrawal does not affect processing that occurred before the withdrawal, and features that depend on AI processing may no longer function for you. You may also delete individual meals or your full account as described below.

Current Gemini service tier. At the date of this Policy, MealUp may use unpaid Gemini API quota. Google states that content submitted to unpaid Gemini services and generated responses may be used to provide, improve, and develop Google products and services, and that human reviewers may process API inputs and outputs for quality purposes. Google advises users of unpaid services not to submit sensitive, confidential, or personal information. Avoid uploading photos that contain faces, identification documents, health records, private correspondence, or other sensitive information that is not necessary for meal analysis. If MealUp changes to a paid service tier or another AI provider, we will update this Policy where the change materially affects data handling.

AI results may be inaccurate or incomplete. MealUp may misidentify food, miss ingredients, estimate portions incorrectly, or suggest an option that is not appropriate for you. MealUp does not claim to detect allergens, hidden ingredients, cross-contact, food-safety risks, medical conditions, or dietary certification from a photograph.

6. Service Providers and Data Sharing

MealUp does not sell personal information and does not share personal information for cross-app advertising or tracking. We share information only as reasonably necessary to operate the Service, including with the following providers:

- Supabase — authentication, PostgreSQL database services, and private storage for meal photos.
- Google Gemini API — meal images, meal-analysis inputs, relevant preferences/goals, and generated AI responses.
- Render — hosting for MealUp’s custom Node.js/Express backend and build/deployment operations.
- RevenueCat — subscription entitlement/status and purchase-related identifiers used to operate MealUp+.
- Apple — iOS platform services, Sign in with Apple, camera/photo-library functionality, and Apple In-App Purchases.

Where a third-party provider processes personal information on MealUp’s behalf, we use providers and contractual or service safeguards intended to require protection consistent with this Privacy Policy and applicable privacy requirements. Providers may also process limited technical information under their own terms and privacy practices where they act independently.

7. Storage Location and Security

MealUp uses a custom Node.js/Express backend hosted on Render and Supabase for authentication, PostgreSQL database services, and storage. The current Supabase project is hosted in Southeast Asia (Singapore). Meal photos are stored in a private Supabase storage bucket.

MealUp is designed to transmit production app and Supabase traffic over HTTPS/TLS. Supabase documents encryption at rest for stored data, including database storage. MealUp does not use separate end-to-end encryption. No method of storage or transmission is completely secure, so absolute security cannot be guaranteed.

8. Subscriptions and Payments

MealUp offers Apple In-App Purchases through RevenueCat. MealUp receives subscription and entitlement information needed to determine whether premium features are available. Apple handles payment processing for App Store purchases; MealUp does not receive your full payment-card details from Apple.

9. Data Retention

Account and meal data are kept while your account and saved meals remain active, unless a longer period is required or permitted by law. You can delete an individual saved meal without deleting your entire account.

MealUp does not currently maintain separate database backups under its current Supabase plan. Supabase may retain service or infrastructure logs according to its own retention settings and policies. The current Render setup uses build logs; MealUp is not configured to maintain separate Render application or user-activity logs.

10. Account and Meal Deletion

You can initiate deletion of your MealUp account from the Profile screen in the app. The deletion flow is designed to queue removal of your Supabase Auth account, profile, saved meals and meal items, upgrade suggestions, subscription/usage records maintained by MealUp, stored Apple authorization credentials, and meal photos in the meal-photos bucket. Processing may take up to 24 hours.

If you use Sign in with Apple, MealUp is designed to revoke the related Apple authorization as part of the account-deletion process. Some limited provider-side technical records or logs may remain temporarily under the provider's own retention practices or where retention is legally required.

Deleting your MealUp account does not itself cancel a subscription billed by Apple. If you have an active App Store subscription, you should separately manage or cancel it through your Apple account settings.

11. International Processing

MealUp is operated from Hong Kong, while the current Supabase project is hosted in Singapore and other service providers may process data in other locations. By using the Service, your information may therefore be processed outside the country where you live, subject to applicable law and the safeguards used by the relevant provider.

12. Your Choices and Rights

Depending on applicable law, you may have rights to request access to, correction of, deletion of, or a copy of your personal information, or to withdraw consent where processing is based on consent. You can also change device permissions, edit your preferences, delete individual meals, or initiate account deletion in the app.

To make a privacy request or withdraw consent for future AI data sharing, contact angelahoykay@outlook.com. We may need to verify your identity before completing a request.

13. Age Requirement

MealUp is intended only for people aged 18 or older. You must be at least 18 years old to create an account or use MealUp. We do not knowingly provide MealUp to, or intentionally collect personal information from, people under 18. If you believe a person under 18 has provided personal information to MealUp, contact us so that we can review and, where appropriate, delete it.

14. Changes to This Policy

We may update this Privacy Policy as MealUp changes, including when we add providers, features, payment options, or materially change how information is processed. We will update the "Last updated" date and provide any additional notice or consent required by applicable law.

15. Contact

Privacy questions and requests can be sent to:

- Operator: Yip Angela Hoy Kay
